

Portable Knowledge Product Build Verification Guide

Internal H03 deterministic pipeline proof

Product: H03-PROD-MVP-001

Knowledge package: H03-KP-MVP-001

1. Reproducibility is part of the product

A portable knowledge-product factory treats reproducibility artifacts as first-class deliverables.

Authentication and browser session material stays outside product lineage and is manually reprovisioned when hosts change.

2. Separate knowledge from presentation

Knowledge Packages are presentation-independent and should compile through a Product Blueprint and Document AST before rendering.

3. Evidence-first lineage

Every bounded product build needs explicit evidence and artifact lineage rather than model output alone.

4. Economic truth without invented zeros

Economic fields that have not been observed remain UNKNOWN or UNPROVEN, never inferred as zero.

H03 may author semantic economic observations but cannot bypass the single logical die-state-manager for canonical Company Truth.
